Subject: North Quarry
[NewTrashNorthQuarry2004.pdf](#)

DNR and EPA,

I'm really not trying to be a pain. Republic Services or EMSI has said that no trash has been dumped in the North Quarry for a significant amount of time, like several decades, and that it is less likely that the north quarry will have a spontaneous smoldering fire because the decomposition has mostly taken place.

Attached is a photo from 2004 that shows the landfill owner at the time dumped new wastes along what appears to be near or part of the proposed isolation barrier. The refuse appears to only be 10 years old and within the range of decomposition that could lead to an independent SSE.

I just want to make sure DNR and EPA has this information if it did not have it previously to inform the state and federal government's understanding and position on what's happening regarding the isolation barrier.

Thanks,
Ed
